

## The Power to Drive Business Processes Faster

The Workflow Platform for RightFax extends the life and usability of your RightFax system by transforming it into a high-demand, user-friendly, transactional capture and delivery solution.

- ▶ Flexible workflow client to enable employees to view selected inbound fax documents and perform indexing, validation or workflow tasks as well as complex “completion” actions, all based on a rules template.
- ▶ Database updates and lookups to intelligently fill index values, identify document senders by CallerID and determine how to route and prioritize documents.
- ▶ Pre-built and configurable connectors to integrate with EMR/EHR and other healthcare applications as well as enterprise-class document management, ECM, CRM, ERP and database applications such as Microsoft SQL and SharePoint, IBM DB2 and Content Manager, Salesforce.com, Siebel, Google Docs and more.
- ▶ API's for solutions that require real-time connections, including XML, Web Services, .NET, C#, COM and FileScan API for straightforward file pickup and processing without special interface programming or versioning issues.
- ▶ Barcode generation, detection and parsing for reliable, accurate indexing of both 1D and 2D barcodes even under harsh receipt conditions, plus barcode stamping to add key identifying information to an outbound document; when the signed document is returned, the system already knows where it goes.
- ▶ Fax naming via date and time, user profile, database lookups, 1D/2D barcodes, workflow routing and more to enable efficient routing, storage and retrieval.
- ▶ Single/multi- page TIFF/PDF support and file separation to enable each document to be delivered to different locations in different formats according to business rules.
- ▶ Interactive document stamping of signatures and approval details with audit trails.
- ▶ Scanning to workflows, to capture and process documents from the network or remotely.
- ▶ GUI-driven, rules-based configuration to easily create, change or add complex functions without expensive, risky and time-consuming programming.
- ▶ Mail merge to easily send large numbers of unique fax documents at any scheduled time and priority.
- ▶ Multiple profile support to apply rules and workflows to different types of documents, and to assign projects and interface options to users, all based on business needs.
